About me

Senior Software Engineer with 13+ years of full-stack development experience focused on retail e-commerce. Held core engineering roles at global industry leaders including The LEGO Group, Tesla, Nike and eBay, with a proven track record of building core business systems from scratch, driving architecture upgrades, and leading engineering teams. Deep expertise in the Spring ecosystem, microservice architecture and distributed system design. Led high-concurrency optimization and high-availability transformation for e-commerce platforms supporting millions of requests, with extensive experience ensuring system stability during peak promotion events. Hands-on experience in AI application engineering, having delivered a RAG-powered intelligent shopping assistant end to end. Proficient in vibe coding workflows, leveraging AI-assisted development tools to rapidly validate solutions and boost engineering delivery efficiency. Strong product mindset and cross-functional collaboration skills, committed to engineering excellence and continuous learning of emerging technologies.

Work experience

2022.12-2025.8

The LEGO group

Senior full stack software engineer

****Multi-Channel Order System**** - Integrated mainstream C-end order channels including Meituan, Ele.me and JD.com, built end-to-end pipelines for real-time order ingestion, rule-based validation and automated distribution to offline dealer store systems. - Designed event-driven asynchronous architecture with message queue peak-shaving, circuit breaker and rate limiting mechanisms to absorb highly volatile traffic from takeout platforms, maintaining stable performance during meal rush hours and large-scale promotional events. - Implemented idempotent processing and fault-tolerant retry mechanisms for concurrent and out-of-order requests, guaranteeing eventual data consistency and 100% order processing accuracy.

****Product Master Data Management System**** - Owned full lifecycle management of LEGO product master data, covering creation, modification and delisting, with automated distribution to all downstream business systems. - Resolved strong field coupling issues by implementing annotation-

based linked field auto-update via AOP, reducing system maintenance cost and manual operation errors significantly.

****Mobile Sales Dashboard**** - Developed a mobile-side sales reporting system with multi-dimensional filtering and custom date range query capabilities for frontline sales teams. - Optimized year-over-year and month-over-month real-time calculation performance via progressive rendering, cutting first-screen load time by 70%.

****AI Shopping Assistant (WeChat Mini Program)**** - Led end-to-end design and delivery of an AI-powered shopping assistant embedded in LEGO’ s WeChat e-commerce mini program, built on RAG architecture to deliver personalized product recommendations across the full SKU catalog. - Defined the full technical stack including BGE Chinese embedding model, Milvus vector database and Qwen large language model, and implemented the complete pipeline: data cleaning & chunking, batch vectorization, semantic retrieval, prompt engineering, LLM integration and mini-program frontend interaction. - Reduced manual customer service workload and improved recommendation accuracy and conversion rate after official launch.

2020.11-2022.12

Tesla

Senior Full stack software engineer

**** Tesla offical eShop ****

- Served as Project Owner of Tesla China Official Online Shop (<https://shop.tesla.cn>)), led a 5-member engineering team to localize and deliver the e-commerce platform, covering requirement review, architecture design, development and production operation.

- Drove architecture upgrade from monolithic system to high-concurrency, high-availability distributed architecture. Designed multi-level caching and asynchronous peak-shaving solutions, supporting 1 million requests per minute during promotions with 99.99% core API availability.

- Built a pre-allocation inventory mechanism with full audit trail, including deduction, rollback and exception tracing, eliminating oversell and undersell issues and achieving 99.99% inventory accuracy.

- Established 7x24 on-call mechanism, led the team to support multiple new product launches and promotional campaigns with zero critical production incidents.

2018.1-2020.10

Nike

Full stack system engineer

****Dealer Master Data Management System**** - Led a 4-member engineering team to build the dealer master data management system from scratch, owning the full lifecycle from requirement analysis, architecture design to development, testing and official launch. - Designed unified data models for dealers, physical stores and commodities, established standardized data governance workflows, and realized reliable cross-system data synchronization with upstream and downstream business systems.

- Improved full-link data consistency across systems by 40% and reduced manual data maintenance workload by 50% after launch.

****Dealer Order Capture System**** - Led microservice architecture design and implementation for the dealer order capture system, built a distributed service ecosystem based on Spring Cloud with service discovery and load balancing. - Integrated OKTA third-party authentication service, implemented SSO based on JWT standard to ensure secure and consistent cross-system access. - Delivered performance optimization solutions including database sharding, asynchronous processing and batch computing for tens of millions of orders during peak booking windows, reducing core API latency by 60% and ensuring system stability under high traffic. - Owned requirement review, technical decision-making and team task management, ensuring on-time and high-quality delivery of all projects.

2015.4-2017.12

eBay

Senior software engineer

****eBay Main Station Refactoring Project**** - Participated in the full-stack refactoring of the eBay official website, based on Spring and jQuery tech stack. - Took charge of online problem troubleshooting and root cause analysis, delivered targeted optimization solutions to ensure stable platform operation.

****Gumtree Classified Advertising Platform**** - Responsible for the development of user management module and advertisement management module for the global classified advertising platform. - Designed and implemented anti-fraud functions based on user behavior analysis, effectively reducing malicious posting and fraudulent transactions.

- Tech stack: Spring Boot, Kafka

2011.8-2015.4 **EA(www.pogo.com)** **Junior software engineer**

- ** www.pogo.com ****
- Responsible for backend integration of various third-party systems for the Pogo casual game platform (SSH architecture).
 - Participated in requirement review, feature development and daily system maintenance.
 - Handled online production issues on a 7x24 on-call basis to support stable website operation.
 - Tech stack: Spring, Hibernate, jQuery, MySQL

Education

2022.9-2024.5	Illinois Institute of Technology	Software Engineering	Master
2015.3-2018.1	Shanghai Marine University	Computer Science	Bachelor
2007.9-2010.7	Shanghai Marine University	Transportation Management	Associate
